Katonic ACE Features

Understands your organisation's context

Katonic Ace's answers are factually derived only from the enterprise knowledge sources you determine.

Generative AI search

Ace uses natural language understanding and advanced AI techniques to grasp the user's search intent to enhance the relevance of results.

FAQs

Save verified responses to common questions from customers or fellow employees into Katonic Ace's chat and search database.

Enterprise-grade security controls

Active directory mapping, role-based permissions, sensitive information redaction, harmful content filtering, and more.

Knowledge sets

Segment your business' knowledge for only certain users to access.

Source references

See the exact documents Ace uses to source information from in its answer.

Fully customisable

Transform your chat instance to match your brand identity using settings like chat theme, brand name, logo, tagline, domain, and more.
